RUNNING PROOF BEFORE SHIP

Why Buy Refurbished

THE ECONOMICS

A new flagship production press is a six-figure commitment with a multi-year depreciation curve. A professionally refurbished unit of the same generation does the same job at a fraction of the capital outlay — which means it pays for itself in months instead of years.

55–75%

lower capital cost than the equivalent new model

Same

print resolution and rated speed class as the new unit

Shorter

payback period — the machine earns while it depreciates less

01 Who buys refurbished

Buyer	Why it works for them
Print shops adding capacity	A second production press without a second loan — take on bigger jobs without betting the business
New print businesses	Enter the production market at entry-level money, upgrade later once the customer base is built
In-plant / corporate print rooms	Bring long-run colour work back in-house and stop paying trade prices
Equipment dealers	Stock a tested unit with a running video and a documented condition report
Printers in emerging markets	Same output class at a landed cost that the local market can actually amortise

The honest caveat. A refurbished press is not a new press. Its remaining life depends on total impressions, cylinder condition and how it was serviced. That is exactly why we send a running video and an impression count before you commit — and why we will tell you when a particular unit is not worth the money.

Model Line-Up

SIX TIERS — FIND YOURS FIRST

Pages per minute is the number everyone quotes, and the worst way to choose. Two presses can both be rated 100 ppm and still be completely different machines. What actually separates them is the **platform generation**, the **monthly duty cycle** they are built for, and the **media they can handle**. Find your tier first — then compare inside it.

01 FLAGSHIP

AccurioPress C14000 · C12000

120–140 ppm colour · duty cycle 2.2–2.5 million prints per month

Look here if: you run a commercial print shop where colour work is already queued and the press rarely idles.

C14000 or C12000? Same platform, 20 ppm apart. Unless you genuinely run flat out, the C12000 is the better buy.

02 HIGH VOLUME

AccurioPress C7100 · C7090

90–100 ppm colour · duty cycle 1.6–1.8 million prints per month

Look here if: you need long sheets, banners or oversized work alongside normal production.

The real difference here: the long-sheet capability (up to 1,300 mm simplex) matters more than the 10 ppm between the two.

03 WORKHORSE

AccurioPress C6100 · C6085

85–100 ppm colour

Look here if: you are a mid-sized printer and the volume has not reached flagship level — but you want a genuine production chassis.

C6100 or C6085? Same family, speed tier apart. Buy the speed class you will actually fill.

04 ENTRY PRODUCTION

AccurioPress C4080 · C4070 · C4065

65–80 ppm colour

Look here if: this is your first production press, or you are moving up from an office machine.

Which of the three? Same platform, three speed tiers. Do not pay for 15 ppm more than your job mix needs.

05 COMPACT

AccurioPress C3080 · C3070

71–81 ppm colour

Look here if: budget or floor space is tight, or you want the easiest machine to keep running.

Why this tier still makes sense: the most widely supported platform on the used market — consumables and spares are the easiest to source.

06 MONOCHROME

AccurioPress 7136 · B6136 · B6120

120–136 ppm mono

Look here if: your volume is books, manuals, forms or statements — long runs where colour earns nothing.

Often bought as a pair: a mono press takes the volume load off the colour engine and extends its life.

A model number is not a generation. The digits tell you the speed, not how old the platform is. The C6100 and the C7100 are both rated 100 ppm but they are not the same machine, the same year or the same parts catalogue. On used equipment the question to ask is never "how many ppm" — it is "**which platform is this, and how many impressions has it run**".

Full Line-Up & How to Choose

TIER BY TIER

Tier	Model	A4 colour	What it is for
01 FLAGSHIP	C14000	140 ppm	The speed ceiling. Colour work queued, press rarely idle
	C12000	120 ppm	Same platform one tier down — better price, enough for most shops
02 HIGH VOLUME	C7100	100 ppm	Long sheets, banners and oversized work — at volume
	C7090	90 ppm	Same platform, lower speed tier, identical long-sheet capability
03 WORKHORSE	C6100	100 ppm	Main press for a mid-sized printer — genuine production chassis
	C6085	85 ppm	Same family one speed tier down — buy to actual volume
04 ENTRY PROD.	C4080	80 ppm	Top of the entry-production tier, long-sheet capable
	C4070	70 ppm	Middle of the entry-production tier
	C4065	65 ppm	Lowest entry-production tier — the usual first production press
05 COMPACT	C3080	81 ppm	Easiest tier for spares and consumables; best resale liquidity
	C3070	71 ppm	Lowest entry point into the production class
06 MONOCHROME	7136	136 ppm mono	High-speed A3 black & white — books, manuals, forms
	B6136	136 ppm mono	A3+ monochrome, wider sheet support
	B6120	120 ppm mono	A3+ monochrome, mid volume

Three questions that place you in a tier

Question	Answer
How many colour A4 sheets do you actually run per month?	Under 50k → 04 / 05 · 50–150k → 02 / 03 · Over 150k → 01
Do you need long sheets, banners or oversized work?	Yes → tier 02 (C7100 / C7090) · No → look further down the list — do not pay for capability you will not use
Is this your main press, or a second unit for overflow?	Main press → tier 03 minimum · Second unit / overflow → tier 04 or 05

Why choose by tier instead of by speed. A press running at 20% of its rated load costs you maintenance, floor space and depreciation for capacity you never bill. Buy the speed class your job mix actually fills — then tell us the job and we will tell you honestly whether the tier you picked is enough, or already more than you need.

Not listed? Stock changes weekly and we source to order. Tell us the model, the tier or just the job you need to run, and we will come back with what is available.

Within a Tier: What Moves the Price

SAME MODEL, DIFFERENT MONEY

Once you have picked a tier, the model number stops being the interesting question. Two machines of the same model and the same year can be priced very differently — and the gap is almost never random. These are the five things that create it.

What varies	Price impact	What to ask
Total impressions	Large	How many impressions, and does it match the service record? Two units of the same model can differ 20–30% on this alone.
Finishing fitted	Large	Which finisher is included — booklet maker, perfect binder, stacker, creaser? Bought separately these cost real money.
Cosmetic grade	Moderate	Grade A / B / C — and what makes it that grade. Panel damage and worn covers are cosmetic, not mechanical.
Parts replaced in refurb	Moderate	What was renewed, and with OEM or compatible parts. This is what you are not paying for later.
Local spares availability	Ongoing	Who services this model in your country and what do they charge? A cheap machine with no local support is expensive.

The one that surprises buyers most: finishing. A press quoted "cheaper" often simply has no booklet maker or perfect binder fitted — and those units are frequently priced separately. Always establish what is *included* before comparing two numbers, including ours.

How we quote. Every unit is described with its impression count, cosmetic grade, the finishing actually fitted, and the parts renewed during refurbishment. If a machine is grade C we will say so — a grade C machine at a grade C price is good business; a grade C sold as grade A is not.

AccurioPress C14000 / C12000

FLAGSHIP COLOUR

Specification	C14000	C12000
Colour speed (A4)	140 ppm	120 ppm
Colour speed (A3)	80 ppm	69 ppm
Output per hour (A4)	7,981 sheets	6,832 sheets
Monthly duty cycle	2.5 million prints	2.2 million prints
Resolution	3,600 × 2,400 dpi equivalent, 8 bit	
Paper weight	52–450 gsm, simplex and duplex	
Max sheet size	330 × 487 mm · long sheet 1,300 mm simplex / 900 mm duplex	
Max paper input	14,140 sheets	
Colour & registration	IQ-501 intelligent quality optimiser	
Finishing options	Booklet making with trimming · perfect binding to 30 mm · creasing · slitting · business-card cutting	
Main unit	1,151 × 932 × 1,620 mm · 560 kg	

This is the platform for commercial printers who need full-colour production output with inline finishing — booklets, perfect-bound books, business cards and posters from one pass. Both models share the same engine family; the C12000 is the value pick and the C14000 the throughput pick.

What you receive before paying: a video of the actual unit running under load, the total impression count, cylinder and roller condition notes, and the list of any parts replaced during refurbishment.

AccurioPress C7100 / C7090

HIGH-VOLUME COLOUR

Specification	C7100	C7090
Colour speed (A4)	100 ppm	90 ppm
Mono speed (A4)	110 ppm	110 ppm
Colour speed (SRA3)	53 ppm	48 ppm
Monthly duty cycle	1.8 million prints	1.62 million prints
Resolution	S.E.A.D. X · 3,600 × 2,400 dpi equivalent, 8 bit	
Paper weight	52–400 gsm, simplex and duplex	
Max sheet size	330.2 × 487.7 mm · 900 mm duplex · 1,300 mm simplex	
Max paper input	15,140 sheets	
Toner	Simitri V	
Media handling	Air-suction feeding · automatic media recognition	
Main unit	800 × 1,138 × 1,478 mm · 335 kg	

The C7100 series is the long-sheet platform: banners, A3 and A4 posters at full bleed, and heavy stocks up to 400 gsm run at rated speed rather than crawling through. If your work mix includes packaging mock-ups, display graphics or signage, this tier is the one to look at.

Monochrome Production

7136 · B6136 · B6120

For books, manuals, transactional print and internal documents, a mono production press delivers far more pages per dollar than any colour machine. On the second-hand market these are also the most affordable way to reach genuine 130 ppm class output.

AccurioPress 7136

136 ppm

A3 monochrome production. High-speed duplex book and manual work.

B6136

136 ppm

A3+ monochrome. Wider sheet support for oversized work.

B6120

120 ppm

A3+ monochrome, mid volume. Lower cost entry to mono production.

02 Colour or mono — how to decide

If most of your work is...	Choose
Marketing collateral, brochures, packaging proofs	Colour — C series
Books, manuals, forms, statements	Mono — 7136 / B6136
Mixed, with colour the minority but the money-maker	Colour press + mono press as a pair
Mixed, with mono volume dominant	Mono press, colour outsourced

Running both is cheaper than it looks. The mono press takes the volume load off the colour engine — which extends its life and cuts the cost per page on the colour work you actually bill at a premium.

Refurbishment & Quality Control

WHAT WE ACTUALLY DO

"Refurbished" means nothing on its own. What matters is which parts were replaced, what was measured, and whether anyone ran the machine under load before it was packed. This is our sequence.

Step	Action	What it protects you from
01	Incoming inspection before purchase	Buying a unit with a known fault we could have refused
02	Impression count against service records	Paying flagship money for a machine that has run 10 million prints
03	Cylinder, roller and drum condition assessment	Line artefacts that only appear once you are running paid work
04	Consumables replacement of worn items	Discovering a worn unit the week after installation
05	Registration and colour calibration	Front-to-back misregistration on duplex work
06	Full function test of every finishing option fitted	Paying for a booklet finisher that jams
07	Running video under load, sent to you	Buying from photographs
08	Cleaning, securing and export packing	Transit damage on a 335–560 kg machine

Unit as inspected and configured — every fitted finishing option tested before packing Long-sheet / banner accessory trays verified

Condition grading. Units are described as A, B or C based on cosmetic condition and total impressions. We will always tell you which grade a unit is before you pay — a grade B machine at a grade B price is good business; a grade C machine sold as A is not.

Before You Buy Any Used Press

FROM ANYONE, NOT JUST US

This checklist is what we would tell a friend. Use it on our machines too. A supplier who resists these questions is telling you something.

01 Ask for these seven things

Request		Why it matters
✓	Video of the machine running under load	A 30-second idle demo proves nothing. Ask for continuous output of actual jobs
✓	Total impression count vs. service records	The single strongest indicator of remaining life
✓	Print sample — especially a full-colour duplex job	Shows registration, banding and colour consistency in one page
✓	List of parts replaced during refurbishment	Tells you what you will not have to replace yourself
✓	Which finishing options are actually included	Finishers are frequently priced separately — get it in writing
✓	Consumables and spares availability in your country	A great machine with no local spares is an expensive ornament
✓	Error and service log history	Repeating fault codes point to a problem that was never solved

02 Red flags

- Only photographs, no running video
- "Impression count not available"
- Price far below every other listing for the same model
- Pressure to pay a deposit before you see it run
- Vague answers about which finisher is included
- No service history of any kind
- Refusal to provide a print sample
- Seller cannot explain what was refurbished

One more thing. Ask what the machine was used for. A press that ran light marketing work and a press that ran 24/7 book production can be the same model and the same year — and worth very different money.

Delivery, Installation & Support

AFTER THE INVOICE

/ Shipping

- Export-secured packing with moisture protection for sea freight
- FOB Chinese port as standard; CIF quoted on request
- Container loading photographed and documented
- Documentation prepared for your customs broker
- Assistance with the correct HS classification for used printing equipment

/ Spares & consumables

- Common spare parts sourced and shipped on request
- Consumables supply line for ongoing production
- Advice on which parts to hold as stock to avoid downtime
- Lead times confirmed before you commit to a model

/ Commissioning

- Installation and commissioning guidance
- Remote operating walkthrough on your site
- Operator training material for the fitted finishers
- Initial consumables pack so you can run the first jobs
- Written handover of the maintenance schedule

/ Support

- Direct technical WhatsApp line
- Fault diagnosis by video call
- Spare part identification from a photo or error code
- Upgrade and trade-in route when you outgrow the machine

Be realistic about what remote support can do. We are not an authorised service network in your country and we do not pretend to be. Before you buy, confirm who will service the machine locally and what they charge — we will help you find that answer, but it is your market to check.

Current Offers

CATALOGUE 2026

Machine prices are quoted per unit, not published. A used press is priced on model, year, total impressions, cosmetic grade and which finishing options are fitted — two machines of the same model can differ substantially. What follows is what we are offering on top of the quoted price.

01 The headline saving

Offer	Condition
55–75% below the cost of the equivalent new model	Applies across the refurbished AccurioPress range; exact saving depends on model and configuration
Free running video and impression report	Every unit, before you commit to anything
Free condition grading disclosure	Grade A / B / C stated up front, with the reason

02 Included with every order

Offer	Condition
Installation and commissioning guidance	All orders
Remote operator walkthrough	All orders, scheduled at your convenience
Initial consumables pack	All orders — so the machine can run day one
Maintenance schedule handover pack	All orders
Spare parts sourcing support	Ongoing after delivery

03 Multi-unit & repeat buyers

Offer	Condition
Preferential pricing on two or more units	Same or mixed models in one shipment
Combined-shipment saving	Loading multiple machines into one container
Repeat-buyer terms	Second and subsequent purchases
Trade-in / upgrade route	Existing customers moving up a speed class

How to get your number: tell us the model or the job you need to run, your destination country, and whether you need finishing. You will get the unit price, what is included, the impression count and the running video — before any deposit.

Offers are indicative for the current catalogue period. Final terms, configuration and warranty are confirmed in the proforma invoice and sales contract.

TELL US WHAT YOU NEED TO PRINT

Get the video, the **impression count** and the number

Tell us the model, the job, or just the output you need. We will come back with what is actually available — and tell you honestly if nothing in stock suits you.
